

The Pressure Gauge For Vibration Problems

APPLICATIONS

This gauge has been specially developed to meet the problem of excessive vibration which is the biggest single contributory factor in limiting the life of the instrument. It also helps to protect against the problems associated with rapid surge or loss in pressure and trying to obtain an accurate reading from a fluttering pointer.

Model-632 Direct Mounted,VIBRAGAUGE

(100mm,4" Direct Mounted (Standard))

The "VIBRAGAUGE ®" is available in our applicable configurations,
Please contact our sales advisors for technical assistance

The answer is in the "VIBRAGAUGE ®" the specially designed movement which slows down the fluctuations of the pointer spindle thereby preventing the above conditions from causing rapid wear on the quadrant which gives greatly extended life and cost savings in the long term. It can be considered as a suitable alternative to Glycerine filled instruments. The "VIBRAGAUGE ®" is available in all our bourdon tube gauges.

If you have had trouble finding the answer to this problem specify "VIBRAGAUGE ®" - the economical solution.
Independent tests have proved that it works.

Option:- With liquid-filled case for applications with high dynamic Pressure pulsations or vibration.
